AGRICULTURAL WATER CONSERVATION CLEARINGHOUSE

An Agricultural Water Conservation Clearinghouse has been developed to compile and assemble the latest information regarding ag water conservation. The clearinghouse is a joint project between the Northern Plains and Mountains Regional Water Program and the Colorado Water Institute. The project is supported by the USDA-NIFA National Integrated Water Program and the Colorado Water Conservation Board.

The mission of the Agricultural Water Conservation Clearinghouse is to increase access to research-based information, to help build collaborative relationships between land grant universities and action agencies, to provide technical expertise regarding ag water conservation, and to offer detailed information on the management, policies, and laws surrounding ag water conservation.

For more information contact: faith.sternlieb@colostate.edu

WHAT IS AG WATER CONSERVATION?
- Increased crop water use efficiency
- Decreased crop consumptive use
- Improved irrigation application efficiency
- Increased capture and utilization of precipitation
- Increased irrigation water diversion and delivery efficiencies
- Reduced water use through adoption of conservation measures and new technologies for water management
The Agricultural Water Conservation Library provides a refined bibliographic review of ag water conservation literature such as books, reports, journal articles, and conference proceedings. Resources include websites for national research centers; Agricultural Experiment Stations and other related agencies; an ag water conservation glossary; answers to frequently asked questions; a listing of educational programs; schedulers, calculators, and atlases; manuals and guides; online education and courses; and subscription to global ag water news.

PARTICIPATE

💧 We invite your participation in building the content of the website and library
💧 We are accepting contributions including reports, management plans, articles, and fact sheets to expand the library, as well as water conservation news, events, training and conferences
💧 An interactive blog creates discussion topics and encourages communication related to ag water conservation across the following sectors: Management and Policy, Production and Industry, and Research and Academia

The goal of the Northern Plains and Mountains Regional Water Program is to protect and improve the quality of water resources by facilitating development, delivery, and implementation of new and existing practices throughout the region.
